

Software Documentation: Overview

Installation Guide

Pre-installation Checklist

Before installing the software, please ensure you have the following:

- A computer meeting the system requirements
- Administrator access to the computer
- An active internet connection for downloading the software and updates

Installation Steps for Windows

1. Download the installation file from our official website.
2. Double-click the downloaded file to start the installation process.
3. Follow the on-screen instructions to complete the installation.
4. Once the installation is complete, launch the software from the Start Menu.

Installation Steps for macOS

1. Download the DMG file from our official website.
2. Open the downloaded DMG file and drag the software icon to the Applications folder.
3. Open the Applications folder and double-click the software icon to launch it.
4. Follow any on-screen instructions to complete the initial setup.

Installation Steps for Linux

1. Download the installation package (DEB or RPM) from our official website.
2. Open a terminal window and navigate to the directory where the package is downloaded.
3. For DEB packages, run: `sudo dpkg -i package_name.deb`

Software Documentation: Overview

4. For RPM packages, run: `sudo rpm -i package_name.rpm`
5. Once the installation is complete, launch the software from the application menu.

Post-installation Configuration

After installing the software, please follow these steps to configure it:

1. Launch the software and log in with your administrator credentials.
2. Navigate to the Settings menu to configure system preferences.
3. Set up user accounts and assign appropriate roles and permissions.
4. Ensure all necessary data is imported and properly configured.
